In Search Of Our Origins: How Quran Can Help In Scientific Research (Origin Of Creation Book 1)

Synopsis

In Search of Our Origins, presents complex but interesting information on the origin of life and man. The 119 hints/pointers, extracted from the analysis of the original words of the Quran, seem to tell us how the first molecule of life arose on the planet, what was the mechanism involved, where the event occurred on the primeval earth, and what did happen subsequently. The pointers then tell us how the life is linked to man, how the first man and his mate were created, where they were nurtured initially, and when and where did they appear on the earth. The research also discusses Jinn and angels, and the concept of Paradise with respect to Adam, within the parameters of the Quran and modern physics. Akhtar argues that the phenomenon of revelations is extraterrestrial, and presents a mechanism for verification of the information presented.

Customer Reviews

*** Review by Anam *** In our unending quest for the answers that humanity routinely seeks, I came across Akhtar's book "In Search of our Origins: How the Quran can help in Scientific Research", and it turned out to be as much of an engrossing read as it was intriguing. This 164 page non-fiction single handedly deals with the enigma of our creation so superbly; it leaves a person wondering

after every page as to the ingenuity of its ideas. The mystery covered are regarding our origins, how the first molecule of life sprung into existence, what could have been the mechanism involved, the coming into being of modern human being and his mate simultaneously to make up the world as it is today. But the most remarkable aspect of this book is perhaps the way in which Akhtar has attempted to bridge the age-old gap of religion and science. Religion and science has been at war since eons. The disparity runs so deep that the world is now divided into two clear camps of evolutionists and creationists. The specialty of this book is that it presents a middle path that links the two divergent opinions. And this middle path is not based on wishes and speculations of the author. The arguments are solidly backed by scientific studies and the epistemological studies of the scripture. According to Akhtar, Quran contains a multitude of "pointers", out of which he has isolated more than hundred that give us an insight into the mechanism of our creation. Akhtar feels that these pointers can help us choose the most probable model out of the many available for the unending mysteries of creation.
