Customer Reviews

I have read this author's books before, and I genuinely like his descriptions about the medical profession. This book particularly explains the tensions that physicians face in the conflict between being frank with patients and yet not taking hope away from them, even in serious circumstances. I believe it's easy for people, when they are well, to say that they would fight an illness with no holds barred, but when reality strikes, that dedication may falter or fail. This book does not gloss over the trials of cancer and other debilitating illnesses, but helped me understand in many ways why different patients react in radically differing ways when facing a crisis of their health. As so many baby boomers are aging themselves or facing the crises of aging parents, this book can be a godsend. But it's not just for those of us who are older. It's a wonderful read by a very interesting, compelling writer.

Not what I expected of the book. I thought it would be about how to create and foster hope, but it was about a doctor's experiences with different patients and how they either had hope or not, and why. I found it interesting though.

Excellent stories of hope and the biology of hope for those who may be suffering from chronic or terminal disease.

Item was shipped on time and in good condition--all for a great price! Thank you!
