Photochemistry On Solid Surfaces (Studies In Surface Science And Catalysis)

Synopsis

The latest developments in photochemistry on solid surfaces, i.e. photochemistry in heterogeneous systems, including liquid crystallines, are brought together for the first time in a single volume. Distinguished photochemists from various fields have contributed to the book which covers a number of important applications: molecular photo-devices for super-memory, photochemical vapor deposition to produce thin-layered electronic semiconducting materials, sensitive optical media, the control of photochemical reactions pathways, etc. Photochemistry on solid surfaces is now a major field and this book which provides an up-to-date and comprehensive overview of the subject will be of interest to a wide range of readers.

Book Information

Series: Studies in Surface Science and Catalysis

Hardcover: 624 pages

Publisher: Elsevier Science Ltd (August 1989)

Language: English

ISBN-10: 0444874135

ISBN-13: 978-0444874139
